Experiment 5: Online Flight Reservation System

Aim

To develop an online flight reservation system that allows users to search flights, select seats, enter passenger details, book tickets and view booking history.

Program Code

```
<!DOCTYPE html>

<html>

<head>

<title>Flight Reservation</title>

</head>

<body style="text-align:center;background:aliceblue">

<h2>Flight Reservation System</h2>

<input id="from" placeholder="From"><br><br>

<input id="to" placeholder="To"><br><br>

<input id="name" placeholder="Passenger Name"><br><br>

<select id="seat">

<option>Economy</option>

<option>Business</option>

<option>First Class</option>

</select><br><br>

<button onclick="bookFlight()">Book Flight</button>

<h3 id="result"></h3>

<script>

function bookFlight() {

   let f = document.getElementById("from").value;

   let t = document.getElementById("to").value;

   let n = document.getElementById("name").value;

   let s = document.getElementById("seat").value;
```

```
    if(f === "" || t === "" || n === "") {
        alert("Enter all details");
    }
    else {
        document.getElementById("result").innerHTML =
        "Flight Booked Successfully!<br>" +
        "Passenger: " + n + "<br>" +
        "From: " + f + "<br>" +
        "To: " + t + "<br>" +
        "Class: " + s + "<br>" +
        "Ticket ID: FL1001";
    }
}
</script>
</body>
</html>
```

Sample Input

- From: Chennai
- To: Delhi
- Passenger Name: Kumar
- Class: Economy

Sample Output
