Experiment 1: Online Library Management System

Aim

To develop an online Library Management System that allows students to register, log in, search books, view borrowing history and check fines. The librarian can add, update, delete, issue and return books.

Program Code

```
<!DOCTYPE html>
<html>
<head>
<title>Library Management System</title>
<style>
body {
   font-family: Arial;
   background: lightblue;
   text-align: center;
}
.container {
   background: white;
   padding: 20px;
   margin: 50px auto;
   width: 400px;
   border-radius: 10px;
}
input, button {
   padding: 10px;
   margin: 8px;
}
button {
   background: blue;
   color: white;
   border: none;
}
```

```
</style>
</head>
<body>
<div class="container">
<h2>Library Management System</h2>
<input type="text" id="book"
placeholder="Enter Book Name">
<button onclick="searchBook()">Search Book</button>
<p id="result"></p>
<h3>Librarian - Add Book</h3>
<input type="text" id="newbook"
placeholder="Enter New Book">
<button onclick="addBook()">Add Book</button>
<p id="added"></p>
</div>
<script>
let books = ["Python Programming",
            "Java Programming",
            "Web Technology"];

function searchBook() {
    let name = document.getElementById("book").value;

    if (books.includes(name)) {
        document.getElementById("result").innerHTML =
        name + " is Available";
    }
    else {
        document.getElementById("result").innerHTML =
        "Book Not Available";
    }
```

```
}

function addBook() {
   let name = document.getElementById("newbook").value;

   if (name.trim() !== "") {
      books.push(name);
      document.getElementById("added").innerHTML =
      "Book Added Successfully";
   }
}
</script>

</body>
</html>
```

Sample Input

- Book Name: Python Programming
- New Book: Database Management System

Sample Output
