Experiment 4: Online Train Reservation System

Aim

To develop an online train reservation system that allows passengers to search trains, check seat availability, book tickets, generate PNR numbers and check reservation status.

Program Code

```
<!DOCTYPE html>
<html>
<head>
<title>Train Reservation</title>
</head>
<body style="text-align:center;background:lavender">
<h2>Train Reservation System</h2>
<input id="from" placeholder="Origin"><br><br>
<input id="to" placeholder="Destination"><br><br>
<input id="passenger" placeholder="Passenger Name"><br><br>

<select id="class">
<option>Sleeper</option>
<option>AC</option>
<option>First Class</option>
</select><br><br>
<button onclick="reserve()">Book Ticket</button>
<h3 id="output"></h3>
<script>
function reserve() {
  let f = document.getElementById("from").value;
  let t = document.getElementById("to").value;
  let p = document.getElementById("passenger").value;
  let c = document.getElementById("class").value;
  if(f === "" || t === "" || p === "") {
    alert("Enter all details");
```

```
    }
    else {
        document.getElementById("output").innerHTML =
        "Reservation Successful!<br>" +
        "Passenger: " + p + "<br>" +
        "Route: " + f + " to " + t + "<br>" +
        "Class: " + c + "<br>" +
        "PNR Number: TRN1001<br>" +
        "Status: Confirmed";
    }
}
</script>
</body>
</html>
```

Sample Input

- Origin: Chennai
- Destination: Bangalore
- Passenger: Ravi
- Class: Sleeper

Sample Output
