Experiment 6: Online Cake Ordering System

Aim

To develop an online cake ordering website that allows customers to browse cakes, select products, add them to a cart and place orders.

Program Code

```
<!DOCTYPE html>
<html>
<head>
<title>Cake Ordering System</title>
</head>
<body style="text-align:center;background:mistyrose">

<h2>Online Cake Ordering</h2>
<select id="cake">
<option value="500">Chocolate Cake - Rs.500</option>
<option value="400">Vanilla Cake - Rs.400</option>
<option value="600">Black Forest - Rs.600</option>
</select><br><br>

<input id="quantity" type="number"
placeholder="Quantity" min="1"><br><br>

<input id="address" placeholder="Delivery Address"><br><br>
<button onclick="orderCake()">Place Order</button>
<h3 id="result"></h3>
<script>
function orderCake() {
   let price = Number(document.getElementById("cake").value);
   let qty = Number(document.getElementById("quantity").value);
   let address = document.getElementById("address").value;
```

```
    if(qty <= 0 || address === "") {
        alert("Enter valid details");
    }
    else {
        let total = price * qty;
        document.getElementById("result").innerHTML =
        "Order Placed Successfully!<br>" +
        "Total Amount: Rs." + total + "<br>" +
        "Delivery Address: " + address;
    }
}
</script>
</body>
</html>
```

Sample Input

- Cake: Chocolate Cake
- Quantity: 2
- Delivery Address: Rukavari palli, Kadapa

Sample Output
